

1

The VISO II
Altimeter Pocket
is compatible with
both VISO & VISO II

**2**

Place the LB Tool so the tip hooks over the edge of the wide & thin opening in the holder.

Slide your VISO II into the opening until the edge of the altimeter 'clicks' into the groove on the tool.

3**4**

TO REMOVE:
Reverse the
process.

Lift the tool up and forward to pry back the edge of the opening and wedge the VISO II further into the holder. At the same time push down firmly with your other thumb so the unit goes into the holder fully.

Lift the tool out and then use the thin part of the tip of the tool to get the lip of the holder over the corners of your VISO II. Your instrument and mount is now ready to jump! **FLIGHT PERFORMANCE**
